Career Objective

Aspiring Software Engineer with strong interest in Artificial Intelligence, Full-Stack Development, and Agentic AI systems. Seeking opportunities to build scalable, intelligent applications that solve real-world problems in employment, education, and healthcare sectors.

Technical Skills

- Programming: JavaScript, Python
- Frontend: React, React Native, Expo, Tailwind
- Backend: Node.js, Express.js
- Database: MongoDB
- AI/ML: LLM Integration, Resume Parsing, Embeddings
- Tools: Git, GitHub, VS Code, Postman

Projects

- CareerPilot AI – Built an AI-powered job matching mobile application with resume parsing, job scraping, and skill-based recommendation engine.
- Agentic AI Placement System – Developed multi-agent workflow for resume analysis, job discovery, and compatibility scoring.
- Full-Stack Web Applications – Designed responsive dashboards with authentication and REST API integration.

Education

Bachelor of Technology (B.Tech) – Computer Science / Information Technology
(Pursuing)

Strengths

- Strong analytical and problem-solving skills
- Quick learner with adaptability to new technologies
- Consistent, disciplined, and project-oriented mindset
